PREMIUM GARDEN PLAYGROUNDS

---

2026 • For B2B Partners

## What is a KAMY Playground?

A KAMY playground is a garden play set that provides a safe and fun experience for children in a familiar, easily supervised environment. All our playgrounds meet the EN 71/1 European safety standard for residential use.

EN 71 Certified

Home Assembly

Unique Characters

Wide Colour Palette

Safety features: rounded handles, through-bolts, and cover caps protect against injuries — while keeping things colourful and fun.

The tower consists of timber and unit package. The slide and swing module are separately available accessories.

## About Gigawood Ltd.

Gigawood Ltd. has been manufacturing playgrounds and wood products for 20 years. Our family business offers the highest quality garden playgrounds under the KAMY brand, crafted from Tanalith E autoclave-treated pine. All our products carry TÜV EN 71 certification.

Our manufacturing philosophy: natural materials, manual quality inspection, and children's safety above all. We provide 15+ years structural warranty on every playground.

✓ TÜV EN 71

✓ FSC Wood

✓ 15+ Year Warranty

✓ Made in Hungary

---

## TÜV EN 71 Certification

Every KAMY playground holds a TÜV-issued EN 71 certificate. This European standard applies to residential playgrounds and covers mechanical strength, chemical safety, and weather resistance.

**FOR RESIDENTIAL PLAYGROUNDS**

---

## Shipping

All products are delivered flat-packed, securely wrapped on pallets by truck across Europe. Towers and accessories can be ordered together or separately. Swing seats and ropes are provided separately.

## Why Pressure-Treated Pine?

KAMY playgrounds are made from pressure-treated (autoclave) Scots pine — not simply dipped, but protected with high-pressure impregnation.

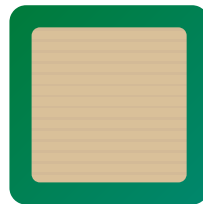

### Pressure Treatment vs. Dipping

Dip treatment only protects the surface to ~1 mm depth. Pressure (autoclave) treatment forces preservative 4–5 mm into the wood at 8–14 bar. If you scratch the surface, the preservative is there — with dipping, it's not.

~1 mm

Dipping

4–5 mm

Pressure treatment

### Advantages Over Hardwood

- ✓ Hardwood (e.g. acacia) is ~55% more expensive
- ✓ Hardwood is 31% heavier — harder to transport and assemble
- ✓ Hardwood requires specialised tools
- ✓ Treated pine offers the same 15–25 year lifespan
- ✓ Tanalith E treatment is heavy-metal-free (EN 71-3 compliant)
- ✓ Cracks and knots are natural — not manufacturing defects

#### 15–25 Year Lifespan

Resistant to fungi, insects, and rot. No annual treatment needed — optional staining for aesthetics.

## What Do You Need?

Every KAMY playground consists of 3 main components.

### Timber

Pressure-treated, deeply impregnated Scots pine, resistant to rot and insects. Can be painted with appropriate outdoor paint. The manual specifies sizes — stay within given dimensions for safety.

### Unit Package

Contains all accessories, fasteners, and safety components required by the standard. Detailed contents shown on the box.

### Slide and Accessories

Slide: 290 cm (for 140 cm platform towers) and 235 cm (for 120 cm platform towers), in multiple colours. Swing module: 240 cm (single swing) and 270 cm (double swing), fits all towers. All accessories delivered flat-packed on pallets.

# KAMY Mammut Tower

The biggest adventure in your garden

The KAMY Mammut Tower is the family's most versatile playground: massive 9×9 cm posts, wide climbing wall and climbing rope. Expandable with a swing module (available separately). The 150 cm...
